Applicant(s)

APEL ET AL.

Examiner

Matthew E. Warren

Art Unit

2815

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 12 January 2007.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 1-16 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-16 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
  2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

**Attachment(s)**

- 1) ☐ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/SB/08)  
Paper No(s)/Mail Date \_\_\_\_\_.

- 4) ☐ Interview Summary (PTO-413)  
Paper No(s)/Mail Date. \_\_\_\_\_.
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: \_\_\_\_\_.

### DETAILED ACTION

This Office Action is in response to the Remarks filed on January 12, 2007.

#### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chang et al. (US 5,266,819) in view of Chau et al. (US 5,512,496).

In re claim 1, Chang et al. shows (figs. 7 and 8) an alternate embodiment for an integrated circuit comprising: a bipolar junction transistor in which a base contact region (61") forms a fishbone configuration and an emitter region (61') is adjacent to the periphery of the fishbone configuration. Chang shows all of the elements of the claims except the fishbone configuration having a spine and at least one finger that extends from one side and at least one finger that extends from a second side of the spine. Chau et al. shows (fig. 12A) a bipolar transistor having a base contact region (transmission line 1208) having a fishbone configuration wherein the spine of the fishbone has a base finger (1212) that extends from one side and at least one base finger (1212) that extends from a second side of the spine. With this configuration a high power multiple finger transistor is formed that eliminates the requirement for airbridges that add process difficulty and cost (col. 8, lines 1-12). Therefore, it would have been

Art Unit: 2815

obvious to one of ordinary skill in the art at the time the invention was made to modify the base contact region of Chang by forming the base fingers on both sides of the spine as taught by Chau to form a high power transistor that eliminates the requirement for airbridges that add process difficulty and cost.

In re claim 2, Chang shows (figs. 8) that an emitter contact region (E) has an isomorphic shape with respect to the emitter region and is in direct physical contact with the top surface of the emitter region. The contact (E) has the same rectangular shape as the emitter region portion below it and is therefore isomorphic.

In re claims 3 and 4, Chang discloses (col. 4, lines 65-67) that the contact regions comprise conductive material such as metal.

In re claims 5, 6, and 12, Chang discloses (col. 5, lines 67) that the transistor comprises AlGaAs and GaAs and may be a heterojunction bipolar transistor.

In re claim 7, Chang shows (fig. 7) that the base region contacting tab is embedded within an extension (portion marked B) from a spine of the fishbone configuration.

In re claims 8-11, pertaining to the types of devices that the bipolar transistor is employed in, it has been held that a recitation with respect to the manner in which a claimed apparatus is intended to be employed does not differentiate the claimed apparatus from a prior art apparatus satisfying the claimed structural limitations. Ex Parte Masham, 2 USPQ F. 2d 1647 (1987). Furthermore, amplifiers and cell phones are merely known devices which may employ a bipolar transistor. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to

Art Unit: 2815

modify the bipolar transistor of Chang by using it in a power amplifier and/or cell phone to enable those devices to operate to increase the operating frequency.

In re claims 13 and 14, Chang does not specifically disclose the specific length or width of the extensions or the distance between the base and emitter regions. However, it would have been obvious to one of ordinary skill in the art at the time the invention was made to form the length or width of the fishbone extensions or the distance between the base and emitter regions of the desired parameters, since it has been held that discovering an optimum value of a result effective variable involves only routine skill in the art. In re Boesch, 617 F.2d 272, 205 USPQ 215 (CCPA 1980).

In re claims 15 and 16, Chau shows (fig. 12A) that the fishbone configuration includes at least six extensions connected to the spine:

### ***Response to Arguments***

Applicant's arguments filed with respect to claims 1-16 have been fully considered but they are not persuasive. The applicant primarily asserts that Chang in view of Chau do not disclose all of the elements of the claims. The examiner believes that the prior art references show all of the elements of the claims. As stated in the rejection above, Chau was cited to cure the deficiencies of Chang by disclosing the base contact region forming a fishbone configuration having a spine with base fingers that extend from a first and second side of the spine. The applicant asserts that Chau does not disclose a base contact region having a spine because the base contact fingers (1212) of the device extend from an input transmission line (1208). However, the

Art Unit: 2815

input transmission line is considered the base contact region having the spine since Chau specifically states that "base contact fingers" extend from first and second sides of the line (col. 7, lines 62-63). Even if the transmission line (1208) of Chau were not a base contact, the invention is still applicable because at the very least, Chau shows a layer having a spine configuration in which electrodes or contacts extend from both sides of the spine like a fishbone. Certainly, one of ordinary skill in the art would be able to apply the concept to a bipolar transistor contact region or any other device having multiple contacts for the benefits recited in Chau. Therefore, the prior art references show all of the elements of the claims, and this action is made final.

### ***Conclusion***

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
